UI/UX Case Study

Role : UI/Ux Designer | IOS/Android/Website | T. Sandhiya

HomeBite

HomeBite is a food delivery mobile application designed to help users order homemade meals from local chefs with ease, seamlessly focus on a simple user experience, ensure secure payments, and provide real-time updates. As the lead UI/UX designer, I prioritized their orders in real time.

Project Duration
Beginner Practice Project

Project Overview

The goal of HomeBite is to create a seamless, user-friendly platform that connects users with chefs supplying small-scale home cooks by giving them a digital platform to showcase their skills.

My Role
UI/UX Designer

Tools

My Responsibilities
- For customers
- For restaurants
- For delivery partners
- App system responsibilities

The Problem

Users face four key issues: a. Poor delivery tracking, b. Lack of transparency in pricing and digital tips, c. Inconsistent order updates, d. Limited payment options. These pain points are addressed by a complete food ordering app with real-time tracking, transparent pricing, secure checkout, simple, and proof-backed during order tracking.

The Solution

Design a fast, simple, and transparent food ordering app that connects users with local home cooks, ensures secure and trust-based delivery in real time with confidence.

Orders track quickly with minimal steps

Discover nearby restaurants easily

View clear pricing with no hidden charges

Track orders in real time

Design Process

User interviews, surveys, competitor analysis, identify user pain points

focus on simplifying the ordering flow, insights and wireframes, identify the core problem to solve

Brainstorming features, information architecture and user flows

Interaction design, the app

Usability testing with users, refine usability issues based on feedback.

User Flow

User Persona

Occupation : College student

Bio
A freshers from college student who is tech-savvy and prefers quick, secure, and positive tasks. Affordable pricing and transparent delivery fees are crucial for him. Reliability, finding the exchange of deliveries.

Goals
- Order food quickly with minimum steps
- Track delivery in real time
- Save time and avoid payment hassles

Frustrations
Lack of unpredictable delivery time.

- No many ways to place an order

Pain Points

Delivery Delay
Users get frustrated when food arrives late or cold, ruining the experience, especially during peak hours.

Hidden costs
Extra charges appear at checkout, leading to trust issues and abandoning cart decisions mid-process.

Transparency
Users cannot clearly see ordered food delivery, personal details, and payment details, which reduces trust.

Checkout process
Too many steps and unnecessary fields slow ordering down and confusing users.
